

Scoop up a fistful of

EARTH.

THE SOIL YOU HOLD IN YOUR HANDS IS A CRUCIAL PART OF A MUCH LARGER PICTURE—AN INTEGRATED, NATURAL SYSTEM.

Earth is unique to a particular system in the same way a fingerprint stamped in a fistful of earth is unique to an individual. As a result, it can be difficult to understand particular problems in integrated, natural systems without the help of those whose training and experience allow them to unravel the complexities.

Nicklin Earth & Water believes that finding solutions begins with thoroughly analyzing the situation, then determining a project's objectives. Only then do we apply responsible engineering; creative, practical science; and finally, action. No two situations are ever the same; no two jobs ever similar in scope. Whether the project is large or small, we have the background to accomplish your goals.

Earth and Water are

COMPONENTS

of a dynamically balanced system. Whether percolating as ground water or cascading down a stream bed, water continually filters and cleanses itself, cleansing and reshaping the earth in the process.

Rin

Yet, not all systems are in harmonious

BALANCE.

Despite earth's innate strength, it can be altered beyond its natural ability to heal. Restoring impacted earth to a condition as close to optimum as possible takes insight, careful study, a comprehensive plan, and practical application.

It takes experience to reach a project's objectives as quickly and cost effectively as possible. At Nicklin Earth & Water, our goal is to set environmental problems on the road to recovery today—for a system in harmony with nature tomorrow.

ers gather energy and

M O M E N T U M

on their journey to the sea. En route, they collect precipitation and ground water, increasing their size and force, while flowing in a way that shapes the land.

Nicklin Earth & Water understands the changing, dynamic cycle of water and how it affects various landscapes. Our ability to grasp the big picture is essential to our work. Solutions, we realize, are never found apart from the situations they reside in, but rather as part and parcel of a whole.
